# RAIN RFID Basics

# RAIN RFID

RAIN RFID is a wireless technology that connects everyday items to networks and the Internet, enabling businesses and consumers to **identify, locate, authenticate,** and **engage** each item.

Healthcare,  
Pharmaceuticals

Industrial  
manufacturing

Retail

# RAIN RFID Use-Cases in Practice

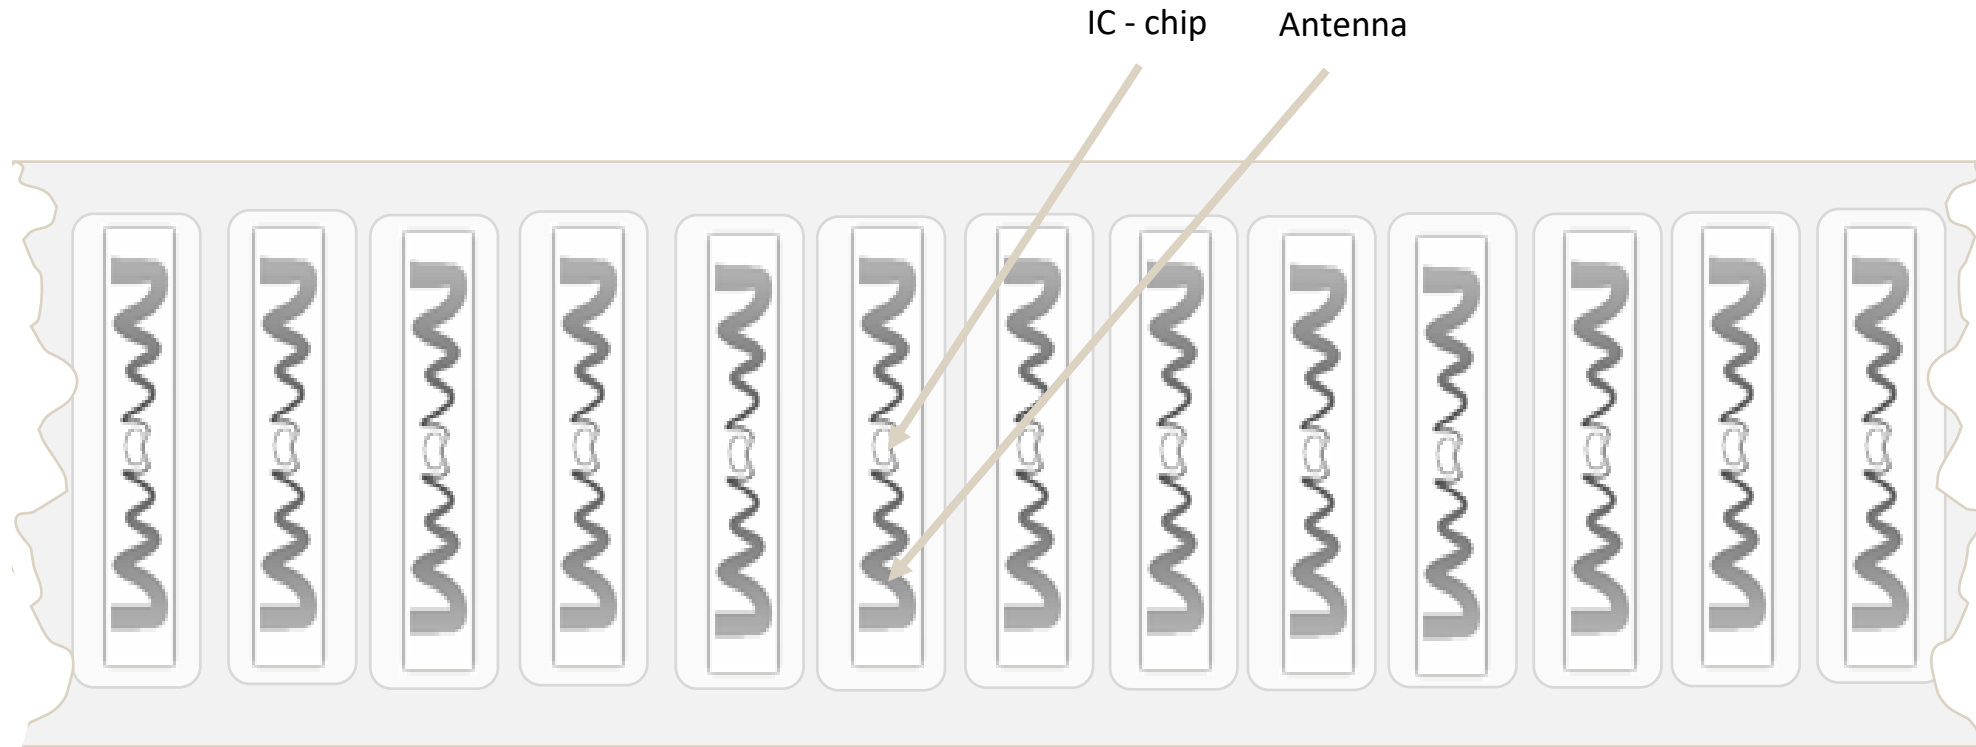

- Manual scanning with handheld readers
- Zone reading with overhead readers
- Point of sale, Self-checkout counters
- Transition reading, aka “gate” or “portal”
- Robots doing inventories
- 24/7 retail cabinets, smart shelves

# An Emblem Indicates RAIN RFID Functionality

# Inlay Structure

# Inlay Terminology

Dry / Wet inlays

PET / paper substrate

Cut / Uncut labels

Woven aka Care label

Hangtag

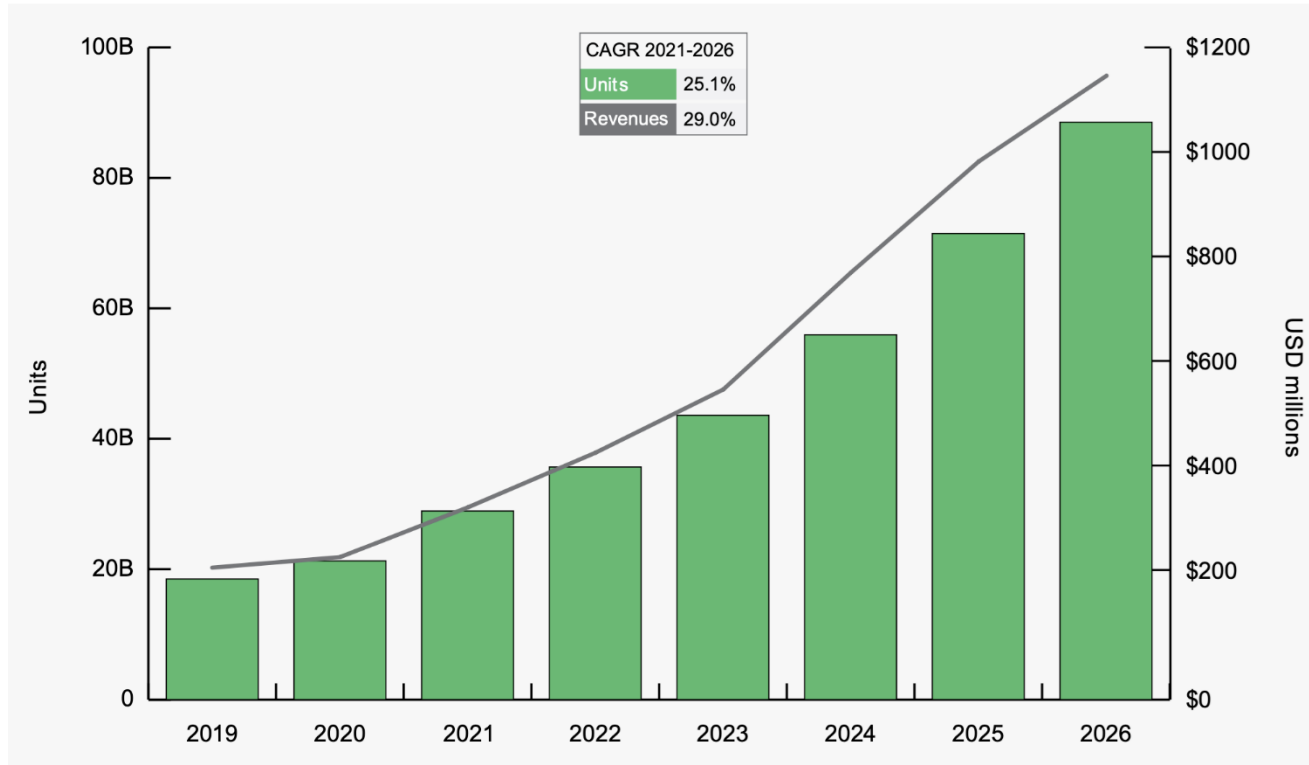

White wet inlay,  
aka Sticker

# How Label Producers Are Reacting to the Increased Demand

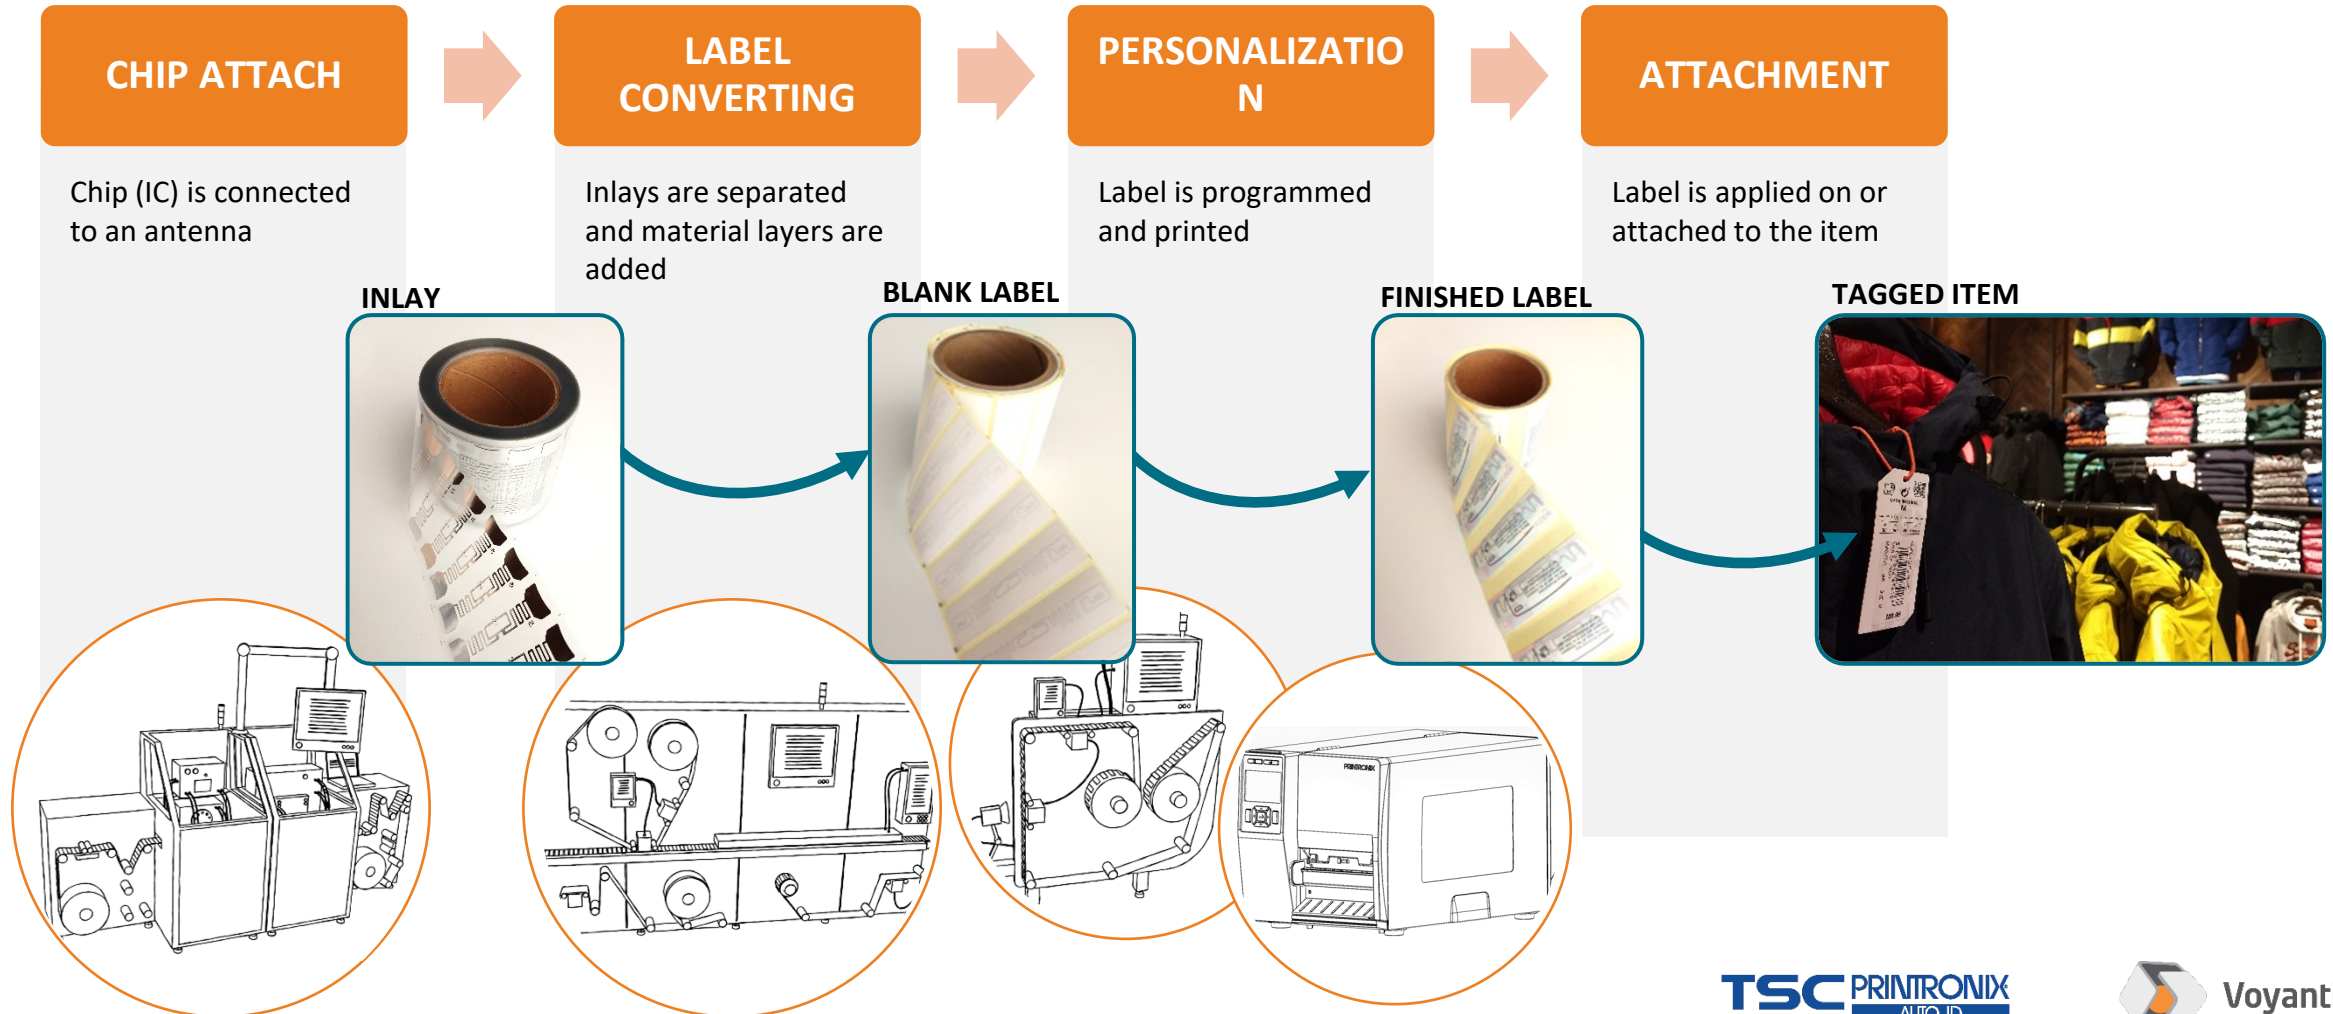

- 1 Acquire information and knowledge
- 2 Expand supplier and partner networks
- 3 Upgrade existing production machinery for RAIN RFID
- 4 Invest to dedicated RAIN RFID production machinery

# RFID Manufacturing Process

**TSC** PRINTRONIX  
AUTO ID

# Tagging Items with RAIN RFID Labels

# How to React to Increasing Volumes

## Increase RFID label manufacturing throughput

- Move from single-lane to multilane setups
- Tune process steps for higher speed and shorter cycle times

## Simplify the label manufacturing process

- Cover more steps in the same process

## Embed RAIN RFID to other product structures

- Add RFID on prime labels
- Add RFID directly on packages
- Integrate directly into items

Mark / print

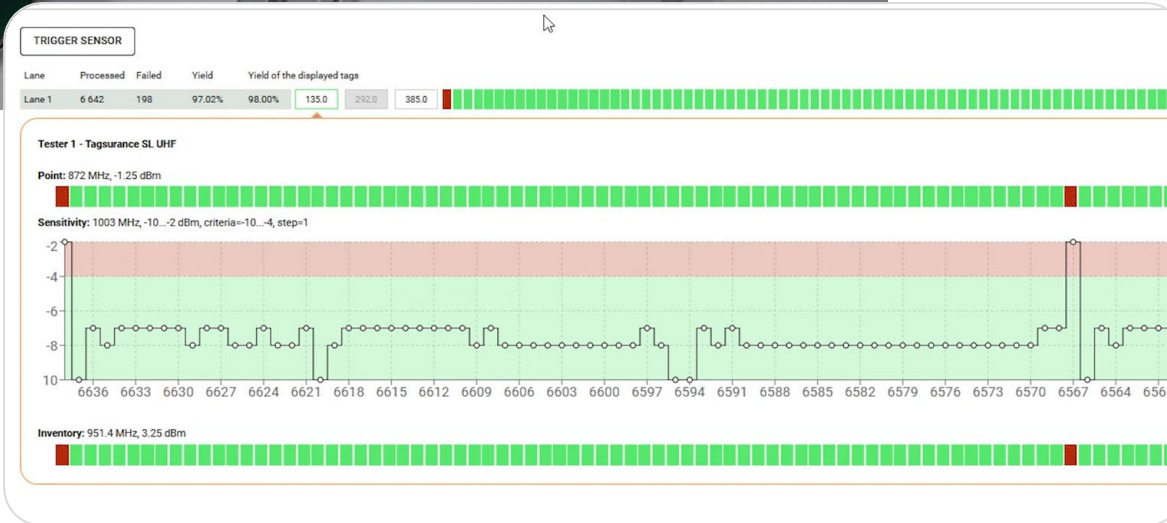

RFID Encode

RFID Test

Optical scan

# Quality Control

# How to Get Started in RFID Converting?

# How to Get Started

My label customer  
needs to deliver  
goods with RFID!?!

Auburn RFID Lab?  
GS1?  
EPC?  
Inlay?

# How to Get Started

1. Source inlays
2. Machinery to insert/laminate RFID inlay to a sticker or prime label
3. Add Quality Control
4. Encoding? If yes – encoding hardware and data models

# Retail RFID Mandate Terminology

# What Lingo Do You Need to Know?

Your customers are turning to you now and saying, “Hey, you do a great job with my labels, but now they need to have RFID too. Deliver.”

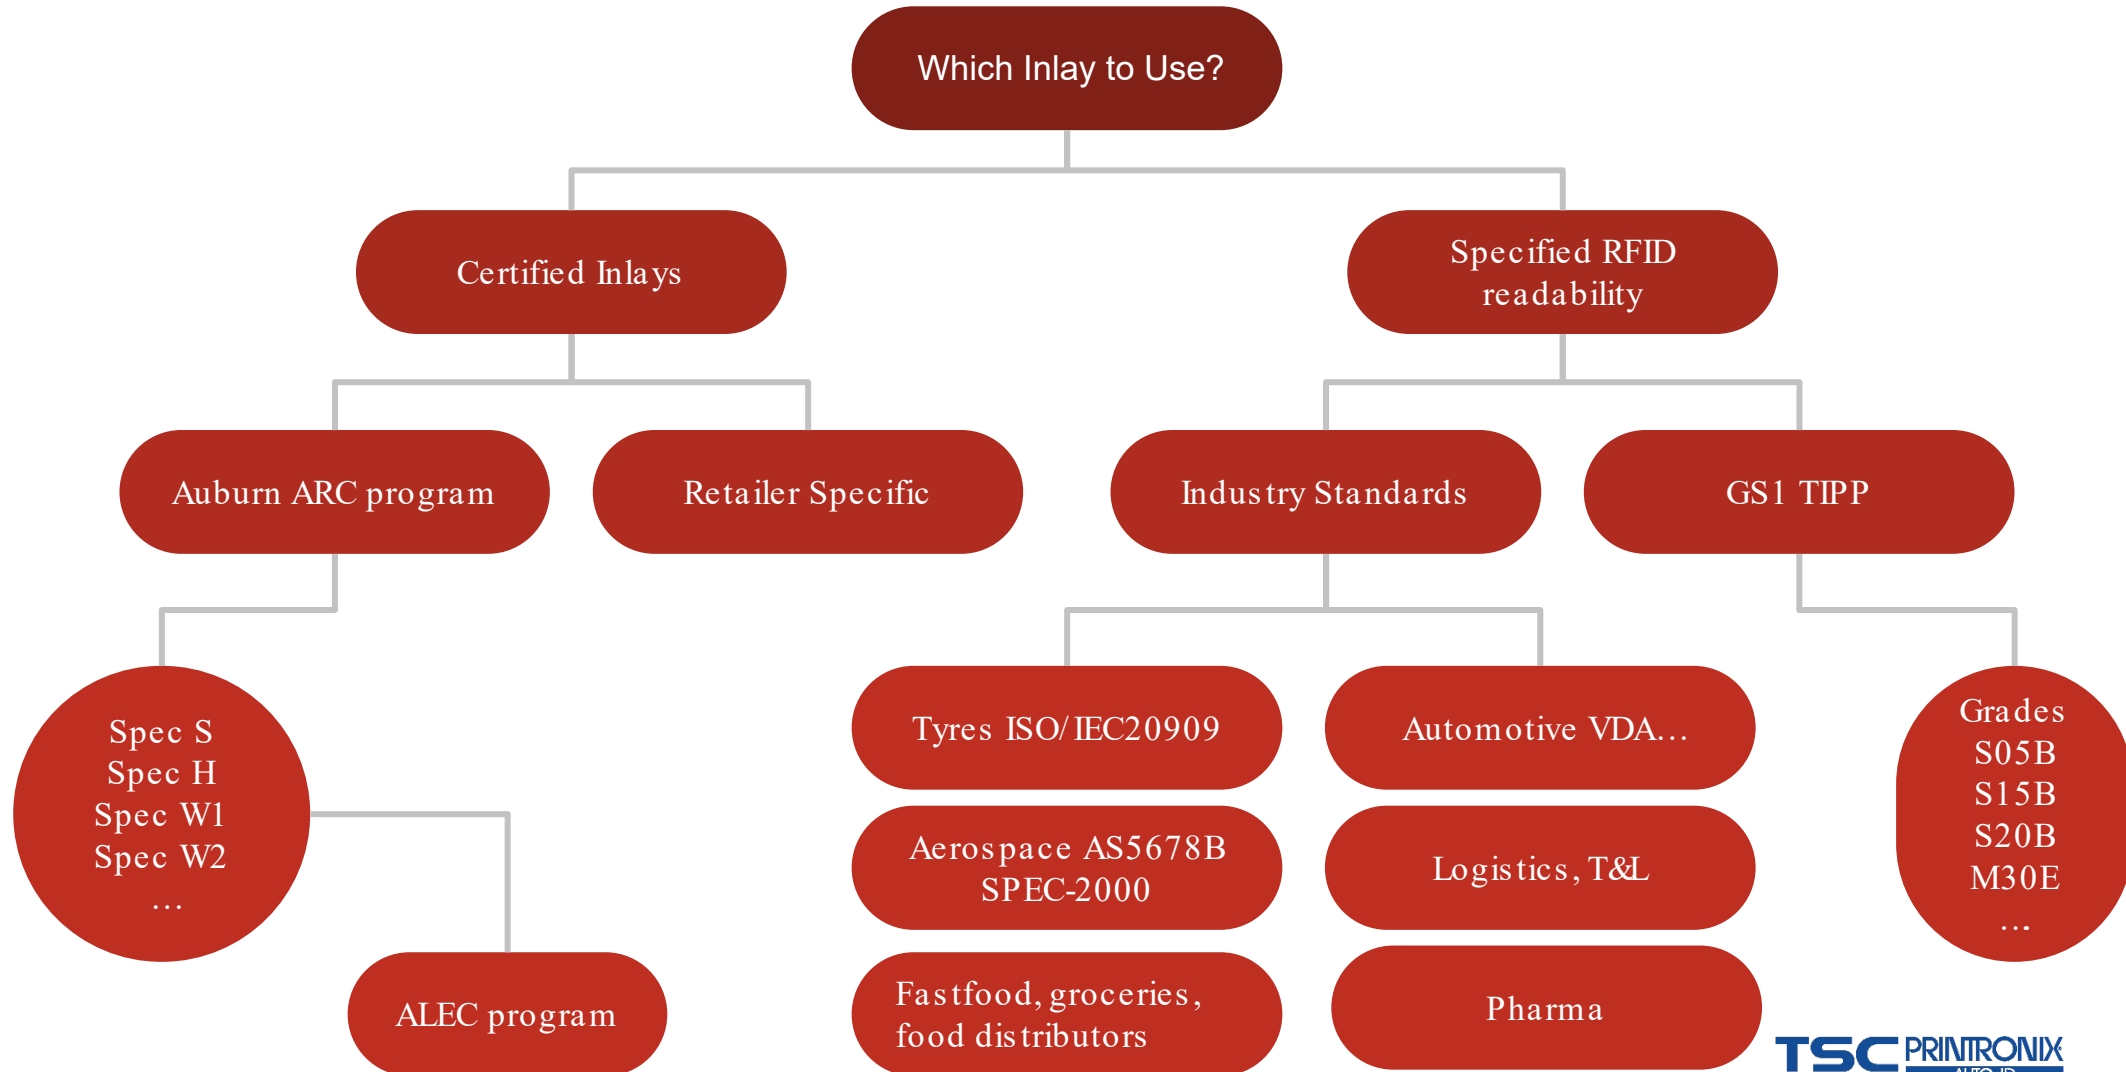

Fundamentally, you are converting a UPC / EAN barcode number to an RFID encoding and adding a serial number

- UPC ≈ EAN ≈ GTIN
  - GS1 number that identifies a product type
- Not to be confused with Electronic Product Code, EPC
  - GS1 term ≈ “RFID” or “RFID-encoded number”
  - EPC or ISO RFID logo usually required on labels
- SGTIN-96:
  - Mindset shift from product type to serialized items
  - GS1 RFID “conversion” of UPC / EAN number to RFID
  - Permalock (Lock not used in most mandates)

Image source: GS1

# What Lingo Do You Need to Know?

# What Lingo Do You Need to Know?

Which inlays can I use?

- Check for allowable / de facto inlays
  - Decision-tree
- Inlay quality certifications
  - (Auburn) ARC Specs
  - Retailer in-house

Apparel

Department	Subcategory	Inlay Spec	Approved Inlay List
D23 - Mens	Apparel	W1	<a href="https://rfidlab.org/arc/spec-w1.php">https://rfidlab.org/arc/spec-w1.php</a>
D23 - Mens	Socks, Polybagged underwear, Banded underwear, Boxed apparel	W2	<a href="https://rfidlab.org/arc/spec-w2.php">https://rfidlab.org/arc/spec-w2.php</a>

Table source: <https://rfid.auburn.edu/walmartspec/>

# What Lingo Do You Need to Know?

## Print and encode terminology

### Possible label types

- Sticker with inlay + ≈1,5mm border
- Prime label, hangtag, embedded tag / packaging
- CAUTION: Facestock and adhesive requirements?

### Label / sticker approval process:

- (Auburn) ALEC program
- Retailer in-house

### GS1 TIPP

- Similar to ARC and ALEC but for tagged items
- In use in Europe; Keep it on your radar for now

Sticker for product with pre-existing barcode

Sticker for product with no barcode

# What Does a Converter Need?

## Understand the Requirement / Mandate

- Inlay defined or ARC Spec? Freedom to choose?
- Sticker, integrated hangtag, prime label?
- Printed, partially printed?
- Encoded? “Encoding Scheme” (aka “numbering system”)?
- Locked? Permalocked?

**Voyantic and TSC Printronix are available to help interpret the requirement documentation**

1 Acquire information and knowledge

2 Expand supplier and partner networks

3 Upgrade existing production machinery for RAIN RFID

4 Invest to dedicated RAIN RFID production machinery

## In-house Expertise on Retail Mandates Needed

- Connections and communication channels with retailers, Auburn, GS1
- Knowledge of the approval process from initial documentation up to approved labels
- Connections with inlay manufacturers
- Encoding schemes expertise (SGTIN-96 and soon GS1 TDS 2.0)
- Serial number management

## In-house Expertise on Retail Mandates Needed

“I’m sorry, that chip and/or inlay has been discontinued”

- Discontinued chips and/or inlays are both an obstacle and **an opportunity** for label suppliers
- Knowledge of chip specs: Memory, Locking / Permalocking, special IC features
- Alternate chips, alternate inlays

## Source Inlays

- Inlay is the core component of any RFID tag or label
- Capabilities of the converting machine may introduce limitations on the type of inlays that can be used
- Inlay needs to meet the performance specification from the retailer

1 Acquire information and knowledge

2 Expand supplier and partner networks

3 Upgrade existing production machinery for RAIN RFID

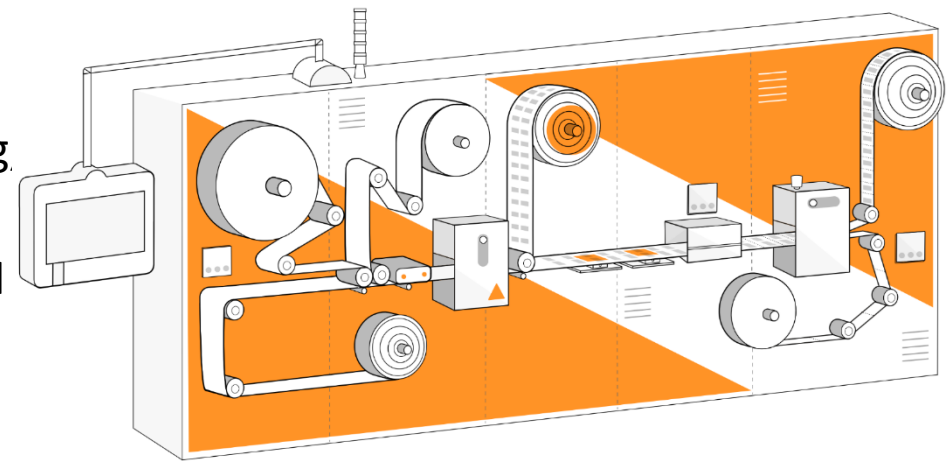

4 Invest to dedicated RAIN RFID production machinery

## Converting Equipment

RFID inlay is a layer of material. Typically, “normal” insertion, laminating, die cuts, etc can be used.

**Quality control is typically utilized, as it reduces production reruns and other unfavorable incidents.**

Inlay is not continuous material, but a “sticker” on its own. Position control is critical – the inlay must be in a consistent position inside the label, and must not be cut, perforated, etc.

1 Acquire information and knowledge

2 Expand supplier and partner networks

3 Upgrade existing production machinery for RAIN RFID

4 Invest to dedicated RAIN RFID production machinery

## Encoding Equipment

The ideal is inline, high-speed encoding for large volumes

- Mindset shift from everyday items with UPC / EAN to everyday items with RFID

Use an RFID printer for:

- Temporary solution
- Low- to mid-volume Stickers
- Low- to mid-volume prime labels that can be accommodated in a printer
- Short-run Service Bureau jobs
